

ARYAN S. NAIR

AI / ML ENGINEERING STUDENT

Delhi, India | +91 77279 94465 | aryansnair546@gmail.com

LinkedIn: [linkedin.com/in/blueled](https://www.linkedin.com/in/blueled) | GitHub: github.com/IIIGODIII | Portfolio: bluelediscool.netlify.app

SUMMARY

B.Tech Computer Science (AI & Machine Learning) student at Bennett University (CGPA 9.03/10) with hands-on experience building cryptographic security tools, LLM-driven analysis pipelines, and full-stack web applications. Comfortable working across the stack — from low-level encryption in Python to React/Node-based systems deployed on Vercel and Netlify — with a consistent focus on clean architecture and product thinking.

PROJECTS

GOD Zero Trace v3.12 | Python, AES-CBC

GitHub: github.com/IIIGODIII/GOD_Zero_trace_V_3.12

- Built a full encryption pipeline in Python implementing AES in CBC mode to prevent pattern detection in encrypted files.
- Engineered a secure file-wipe module that permanently destroys the source file after encryption, leaving zero recoverable trace on disk.
- Designed the pipeline to run key derivation, encryption, and secure wipe as one continuous, dependable process.

Dependencies Algorithm | Python, JavaScript, Ollama (Llama 3)

GitHub: github.com/IIIGODIII/Dependencies_Algorithm

- Built a Python-based analysis pipeline integrating a locally-run Ollama Llama 3 model for large-scale data analysis and pattern prediction.
- Applied the pipeline to model how policy decisions and actions propagate through and impact global-scale systems.
- Paired Python backend processing with a JavaScript interface layer for exploring and visualizing analysis outputs.

Study-AI — AI-Powered Study Platform | Java, JSP, HTML

GitHub: github.com/IIIGODIII/Study-AI

- Developed a mock adaptive-learning platform in Java and JSP, driven by binary rule-based logic instead of external LLM APIs.
- Built server-side logic to personalize content flow based on user responses, replicating intelligent tutoring in a constraint-driven system.
- Demonstrated how rule-based decision trees can approximate adaptive learning behavior without live model inference.

Portfolio Site | React, Node.js, Tailwind CSS, Netlify

Portfolio: bluelediscool.netlify.app

- Built and deployed a personal portfolio using React on the front end with a Node.js-based build workflow, hosted on Netlify.
- Structured reusable components and a responsive, mobile-friendly layout using Tailwind CSS to present projects, skills, and certifications.
- Configured a CI/CD deployment pipeline so pushes to GitHub auto-build and publish to Netlify.

EDUCATION

B.Tech in Computer Science Engineering (AI & Machine Learning), Bennett University 2025 – Present

CGPA: 9.03 / 10 (Sem 2 SGPA: 9.71/10)

TECHNICAL SKILLS

Languages & Core: Python, Java, JavaScript, HTML / CSS

Frameworks & Libraries: React.js, Node.js / Express, Next.js

Web Development: REST APIs, Tailwind CSS, Responsive Web Design, JSP, MongoDB

AI / ML & NLP: Natural Language Processing, Large Language Models (LLMs), AI Fundamentals, Knowledge Representation

Tools & Platforms: Git, GitHub, VS Code, Vercel, Netlify, Zoho Catalyst

Concepts: Object-Oriented Programming, Cryptography (AES, CBC Mode)

ADDITIONAL INFORMATION

Certifications: AI on AMD — AMD AI Academy (Jun 2026) | Machine Learning with MATLAB — MathWorks Training Services (Aug 2025) | Introduction to Python — Infosys Springboard (Oct 2025) | Python — Kaggle (Nov 2025)

Hackathons: Hackaccino 4.0 — Bennett University (Genesis, Student Cabinet SCSET), 2026 | SmartBU Hackathon 2025 — Bennett University, Sep 19–21, 2025

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks
